

EUCLID CHEMICAL

With EUCON BLOCKTITE... *Concrete Masonry performance and profits reach a new height!*

EUCON BLOCKTITE is a convenient ready-to-use admixture designed to mitigate the moisture migration in concrete and masonry products. Featuring a unique polymer formula, BLOCKTITE is added directly to the concrete mixture and forms a tough moisture barrier throughout the masonry unit. It also inhibits the intrusion and migration of soluble salts preventing the damaging and costly effects of secondary efflorescence.

For rewarding results and long-lasting effectiveness, use BLOCKTITE MORTAR ADMIXTURE with masonry treated with EUCON BLOCKTITE to deliver the maximum moisture protection to your masonry structures.

Both EUCON BLOCKTITE and EUCON BLOCKTITE MORTAR ADMIXTURE are compliant for resistance to water penetration and leakage through unit masonry subjected to wind-driven rain according to ASTM E 514.

EUCON BLOCKTITE...

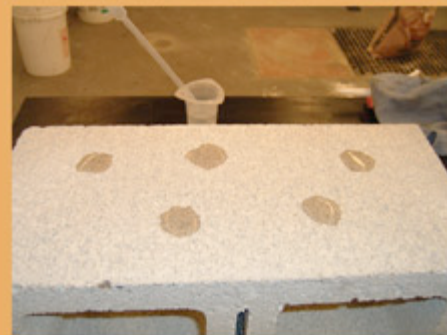

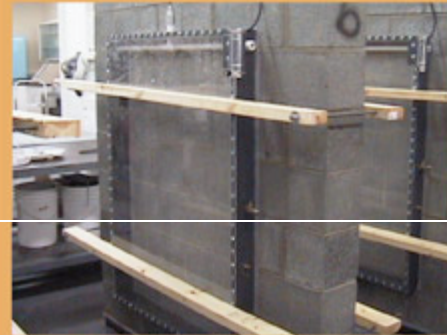

- Provides an integral moisture barrier
- Reduces the migration of salts that cause efflorescence
- Creates a long lasting and maintenance free moisture protection
- Can be used above or below grade
- Inhibits the growth of mold or mildew
- Prevents moisture from wicking through CMU

PRIMARY APPLICATIONS

- Concrete block
- Segmental retaining walls
- Pavers
- Roof tile

For long lasting concrete performance, EUCON BLOCKTITE locks in the look and mitigates moisture intrusion!
